EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

1. The application has been amended as follows.

The specification is amended as follows.

Insert the following paragraph after the title.

This application is the U.S. national phase of International Application No. PCT/HU03/00004, filed on January 15, 2003, which claims priority to Hungarian Application No. P0200172, filed on January 15, 2002.

The claims are amended as follows.

1-2. (canceled)

4. (currently amended) A method for obtaining an anti-tumor substance from the colostrum of an even-toed hoofed animal having leucosis, comprising the steps of:

- a) providing colostrum from an even-toed hoofed animal having leucosis;
- b) shaking the colostrum with an identical volume of a 1:1 mixture comprising i-propyl alcohol and chloroform ~~of identical volume~~ at room temperature for 8 hours;
- c) centrifuging the resulting material at a speed of at least 5000 rev/min for 20 minutes in a cooled state to result in an upper layer, medial layer, organic layer and the rest of the material;
- d) removing ~~selecting~~ the upper layer and subjecting it to freeze-drying; and
- e) diluting the dried upper layer in physiological saline solution to a therapeutically effective concentration of the anti-tumor substance.

27. (currently amended) The method of claim 4, further comprising:

- f) diluting the rest of the material obtained in step 4c) with a 1:1 mixture of chloroform and benzyl alcohol to make up the original volume and shaking the material for 8 hours;
- g) storing the material at a temperature of [[+]]2-4°C;
- h) centrifuging the material from step g) just as in step c) and separating the upper layer; and
- i) freeze drying the upper layer obtained in step h); and

j) diluting the dried upper layer in physiological saline solution to a therapeutically effective concentration of the anti-tumor substance antibody.

30-38. (canceled)

Authorization for this Examiner's Amendment was given by telephone by Applicants' agent, Mr. Barry Wilson, on May 8, 2007.

2. The following is an examiner's statement of reasons for allowance. The prior art neither teaches nor suggests the claimed method of isolating an anti-tumor substance from the colostrum of even-toed hoofed animals that have leukosis. As previously discussed, Janusz et al. (US 2005/0152985) disclose that mammalian colostrum contains an anti-tumor substance that may be used to treat humans, the polypeptide colostrinin, which has a number of biological activities, including cytokine activity (see paragraphs 1-3, 6, 7 and 44-47). But, the colostrinin of Janusz et al. is not isolated by the claimed method.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rosanne Kosson whose telephone number is 571-272-2923. The examiner can normally be reached on Monday-Friday, 8:30-6:00, alternate Mondays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ponnathapu Achutamurthy can be reached on 571-272-0928. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
